Sales & Revenue Analysis Dashboard

Task Deliverable Report

Objective: Build a dashboard to analyze sales and revenue data, monitor key performance indicators, compare product/category/region performance, and support data-informed business decisions.

1. Dataset Overview

The workbook contains 500 synthetic order records dated from 01 Jan 2025 to 30 Sep 2026. Fields include order date, region, category, product, customer segment, sales channel, quantity, unit price, discount, revenue, cost, profit and profit margin.

2. Key Performance Indicators

KPI	Result
Total Revenue	■849,753.21
Total Profit	■205,133.57
Total Orders	500
Units Sold	3,377
Profit Margin	24.1%
Average Order Value	■1,699.51

3. Visualizations Included

• Monthly revenue trend line chart
• Revenue by category bar chart
• Revenue by region chart
• Top products by revenue chart
• KPI cards for revenue, profit, orders and profit margin
• Interactive region, category and sales-channel filters in the HTML dashboard

4. Initial Findings from the Sample Data

• Highest-revenue category: Technology.
• Highest-revenue region: East.
• Highest-revenue product: Laptop.
• Highest category-level profit margin: Office Supplies.

5. Recommendations

1. Compare profit alongside revenue to avoid prioritizing high-volume, low-margin products.
2. Investigate monthly peaks and declines alongside promotions, seasonality and stock availability.
3. Review regional and channel performance before shifting marketing or inventory budgets.
4. Track discounts and cost changes because they can affect profit margin even when revenue increases.
5. Replace the synthetic sample data with verified business data before sharing findings as factual results.

6. Tools and Deliverables

Deliverables: Excel workbook with data and summary sheets, CSV dataset, interactive HTML dashboard, dashboard preview image, and this PDF report. The interactive HTML uses Chart.js from a CDN, so an internet connection is needed to render its charts.

Important Data Note

The supplied task screenshot did not include an actual sales dataset. To make a complete working demonstration, the records and metrics in these files are synthetic and generated for practice. Do not describe them as real company data.
